

Nigeria Safety & Security Multi-Tenant Platform

MVP Implementation Audit Checklist and Agency Module Blueprint

Prepared for product review, implementation gap analysis, and handover to development agent.

Scope: FRSC, Nigeria Police Force, VIO/VIS, Civil Defence, Fire Service, Emergency Management, State Traffic Agencies, Ambulance/Hospital Partners, and Insurance Partners.

Item	Details
Document purpose	Use this PDF to check what is already implemented in the MVP, identify what is missing, and build the remaining modules into the platform.
Primary MVP theme	Reporting and managing road crashes, stolen vehicles, agency response, field operations, referrals, and operational analytics.
Recommended build strategy	Use a shared case-management engine with configurable metadata by agency, case type, jurisdiction, workflow, document template, SLA, and permission.
Review method	For each checklist item, mark: Implemented, Partially Implemented, Not Implemented, Not Applicable, or Future Phase. Add evidence and screen/page reference.

Generated: 11 June 2026

1. Agent Review Instructions

This document converts the platform concept into a practical implementation audit. The screenshots supplied show an existing MVP with agency selection, FRSC officer profile, duty status, offline/sync/location settings, account details, tools, vehicle lookup, referrals, case assignment, user management, analytics/hotspots, and public access for stolen vehicle reporting.

The agent should review the current MVP screen by screen and mark each function below. Where a feature appears in UI but is not fully functional end-to-end, mark it as Partially Implemented and add the exact gap.

- Confirm whether each UI item has working backend data, validation, permission control, audit logs, and test coverage.
- Confirm whether agency-specific workflows are configurable per tenant rather than hardcoded.
- Confirm whether citizen reports, officer actions, referrals, case assignments, and analytics are saved as real records.
- Confirm mobile field behaviour: offline mode, auto-sync, location capture, evidence upload, and duty session logging.
- Confirm security controls: role-based access, tenant separation, encrypted sensitive fields, and audit trails.

Observed MVP Screens from Submitted Images

2. Current MVP - Visible Implementation Audit

Based on the submitted screenshots only, the following features appear to be present in the MVP user interface. The agent must verify whether each one is fully connected to backend services and workflows.

Visible MVP Feature	Seen in Screenshots	Likely Status	Agent Verification Needed
Agency selector	FRSC, NPF, VIO cards with officer sign-in actions	Implemented in UI	Verify tenant routing, authentication, agency branding, and role-specific navigation.
Public access actions	Report Stolen Vehicle and View Nearby Alerts shown	Partially visible	Verify citizen report creation, case reference, evidence upload, alerts map, and routing to Police/FRSC/VIO.
Officer profile	FRSC profile for Brig. Usman Aliyu, badge CMD-007, role, station, sector	Implemented in UI	Verify profile comes from authenticated user record and not static seed data.
Activity summary	Reported, Assigned, Closed counters	Implemented in UI	Verify counters calculate from live cases filtered by officer/agency.
Duty status/session	Duty Status and Start duty now	Implemented in UI	Verify creates duty session, timestamp, GPS, patrol log, and off-duty close action.
Theme switch	Light mode toggle	Implemented in UI	Verify persistent user preference and dark mode compatibility.
Offline mode	Offline mode toggle	Implemented in UI	Verify local storage, queued submissions, conflict handling, and sync errors.
Auto Sync	Auto Sync toggle	Implemented in UI	Verify background sync, retries, and server reconciliation.
Location sharing	Location Sharing toggle	Implemented in UI	Verify permissions, privacy, duty-only tracking, and audit.
Account information	Badge, role, email, station, sector	Implemented in UI	Verify read-only fields, agency directory, and supervisor hierarchy.
Patrol summary	Tool item available	UI visible	Verify active/recent patrol sessions, GPS routes, stops, and reports.
Vehicle lookup	Check registration and owner records	UI visible	Verify vehicle registry mock/API, plate validation, stolen status, owner privacy.
Referrals	Cross-agency shared records	UI visible	Verify transfer/referral workflow, receiving agency queue, notes, SLA.
Case assignment	Assign submitted incidents to officers	UI visible	Verify supervisor permissions, workload balancing, notification to assignee.
Manage users	Create and assign officers	UI visible	Verify admin-only access, invite/deactivate, role assignment, tenant boundaries.
PIN management	Change PIN / Forgot PIN with OTP	UI visible	Verify OTP delivery, rate limiting, lockout, reset security.
Settings & sync	Profile settings and connectivity options	UI visible	Verify settings persistence and device-specific behaviour.
Analytics & hotspots	Trends, crash patterns, operational insights	UI visible	Verify dashboard data, filters, heatmaps, export, and prediction roadmap.

3. Common Platform Tools for Every Agency Portal

These capabilities should be part of the core platform and available to every tenant. Agency portals should configure them differently, but they should not be rebuilt separately for every agency.

Identity, Access and Tenant Management

Function	Description	Status	Evidence / Gap Notes
Multi-tenant agency portal	Each agency has branded portal, users, workflows, permissions, dashboards.	☐	
Role-based access control	Admin, officer, supervisor, command centre, field officer, investigator, analyst.	☐	
Agency hierarchy management	Federal, state, zonal, sector, command, station, unit.	☐	
Officer verification	Badge number, command, role, station, sector, active status.	☐	
Citizen identity profile	Public user can report, track, upload evidence, and receive updates.	☐	
Audit logs	Track who viewed, changed, assigned, closed, escalated, or exported a case.	☐	

Incident Reporting and Case Management

Function	Description	Status	Evidence / Gap Notes
Public incident reporting	Citizens report crash, theft, crime, road hazard, emergency, illegal activity.	☐	
Internal case creation	Officers create cases from calls, patrols, walk-ins, and field reports.	☐	
Case reference number	Unique tracking ID for each report.	☐	
Case categorisation	Crash, theft, assault, fraud, fire, missing person, vehicle issue, etc.	☐	
Status tracking	New, triaged, assigned, in progress, escalated, resolved, closed.	☐	
Evidence upload	Photos, videos, files, voice notes, dashcam evidence.	☐	
Witness/victim management	Capture reporter, victim, affected party, witness and statements.	☐	
Duplicate detection	Detect repeated reports about the same event.	☐	

Geolocation, Mapping and Dispatch

Function	Description	Status	Evidence / Gap Notes
Incident map	Live view of incidents, units, and hotspots.	☐	
GPS and manual location capture	Coordinates plus state, LGA, road, landmark, junction.	☐	
Nearest unit finder	Find nearest FRSC unit, police station, VIO office, Civil Defence post.	☐	
Dispatch management	Assign patrol vehicle, ambulance, tow truck, or response team.	☐	
Geofencing and jurisdiction	Define boundaries by agency, state, command, station, sector.	☐	
Live field tracking	Track active duty teams where permitted and properly governed.	☐	

Communication and Notification

Function	Description	Status	Evidence / Gap Notes
SMS, email, WhatsApp, push	Send case updates and urgent notices.	☐	
In-app notification centre	Alerts for officer and citizen actions.	☐	
Officer-to-command messaging	Secure internal updates and escalation.	☐	
Citizen messaging	Ask for more information, upload evidence, provide feedback.	☐	
Template management	Standard messages by agency, status, case type, language.	☐	

Workflow, Approvals and Inter-agency Referrals

Function	Description	Status	Evidence / Gap Notes
Configurable workflow engine	Agency-specific processes without custom code.	☐	
Task and checklist builder	Scene checklist, inspection checklist, investigation checklist.	☐	
Approval routing	Supervisor approval for closure, fines, reports, escalations.	☐	
Case handover/referral	Transfer case from FRSC to Police, Police to VIO, etc.	☐	
Reopen and review cases	Allow reopening with reason and supervisor review.	☐	

Reporting, Analytics and Intelligence

Function	Description	Status	Evidence / Gap Notes
Operational dashboards	Cases, response time, open incidents, closure rates.	☐	
Hotspot analysis	Crash, theft, crime, road hazard, vandalism heatmaps.	☐	
Officer/team performance	Workload, response time, closure quality.	☐	
Predictive analytics	Forecast high-risk locations, times, and patterns.	☐	
Export and management reports	CSV, Excel, PDF, scheduled reports.	☐	

Document, Payment and Mobile Field Operations

Function	Description	Status	Evidence / Gap Notes
Digital official reports	Crash report, police report, inspection certificate, clearance letter.	☐	
QR verification	Verify authenticity of generated documents.	☐	
Fine and fee payment	Paystack, Flutterwave, Remita, bank transfer, receipts.	☐	
Mobile officer app	Assigned cases, field forms, evidence capture, offline mode.	☐	
AI assistance	Triage, duplicate detection, report summarisation, auto-routing, risk scoring.	☐	

4. Agency-Specific Modules and Functions

FRSC - Federal Road Safety Corps

Module/Function	What it should do	Status	Evidence / Gap Notes
Road crash reporting	Vehicles involved, casualties, road condition, weather, severity.	☐	
Crash investigation	Officer crash report, sketch, photos, witness statements.	☐	
Casualty tracking	Fatal, serious injury, minor injury, hospital referred.	☐	
Emergency response dispatch	Ambulance, rescue team, tow truck, nearby unit.	☐	
Road obstruction reporting	Broken-down vehicle, fallen truck, blocked road.	☐	
Traffic violation enforcement	Speeding, dangerous driving, overloading, seatbelt, phone use.	☐	
Driver licence verification	Check licence validity and class.	☐	
Vehicle document check	Vehicle licence, insurance, roadworthiness, number plate.	☐	
Blackspot management	Identify crash-prone roads and recurring risk patterns.	☐	
Accident report generation	Official crash report for insurance/legal follow-up.	☐	
Towing and hospital handover	Tow provider coordination and injured-person handover record.	☐	

Nigeria Police Force - NPF

Module/Function	What it should do	Status	Evidence / Gap Notes
Crime reporting	Theft, robbery, assault, kidnapping, fraud, cybercrime, vandalism.	☐	
Vehicle theft reporting	Stolen vehicle, stolen plate number, hijacked vehicle.	☐	
Stolen property registry	Phones, cars, motorcycles, electronics, documents.	☐	
Investigation case file	Suspect, witness, evidence, statements, timeline.	☐	
FIR/complaint registration	Formal complaint capture and reference number.	☐	
Statement management	Victim, witness, suspect statements.	☐	
Suspect and arrest management	Suspect profile, arrest details, custody, bail, court date.	☐	
Missing person reporting	Person profile, last seen location, photos.	☐	
Domestic violence workflow	Private, secure, restricted-access reporting.	☐	
Cybercrime report	Online fraud, impersonation, hacking, scams.	☐	
Wanted persons/vehicles	Watchlist, alerts, match notifications.	☐	
Police report request	Official report request and controlled release.	☐	

VIO/VIS - Vehicle Inspection Officers/Service

Module/Function	What it should do	Status	Evidence / Gap Notes
Vehicle inspection booking	Citizen books roadworthiness inspection.	☐	
Inspection checklist	Brakes, lights, tyres, emissions, chassis, documents.	☐	
Roadworthiness certificate	Issue, renew, verify certificate.	☐	
Vehicle defect notice	Record defects and required repairs.	☐	

Module/Function	What it should do	Status	Evidence / Gap Notes
Reinspection workflow	Return after correction and update pass/fail outcome.	☐	
Driving school certification	Register and inspect driving schools.	☐	
Driver test scheduling	Book tests and record outcomes.	☐	
Vehicle compliance check	Roadworthiness, licence, insurance, permit.	☐	
Commercial vehicle inspection	Buses, trucks, taxis, logistics vehicles.	☐	
Impound tracking	Track impounded vehicles where applicable.	☐	

Civil Defence - NSCDC

Module/Function	What it should do	Status	Evidence / Gap Notes
Critical infrastructure protection	Pipelines, power assets, telecoms, rail, water facilities.	☐	
Vandalism reporting	Pipeline vandalism, cable theft, power infrastructure damage.	☐	
Facility patrol management	Patrol routes, logs, checkpoints.	☐	
Incident response dispatch	Response team to infrastructure/security incidents.	☐	
Private security company licensing	Register, inspect, renew private guard companies.	☐	
Disaster response support	Flood, building collapse, fire support, crowd control.	☐	
Crowd/event security	Event risk assessment and deployment.	☐	
Community safety reporting	Suspicious activity, public risk, local threats.	☐	
Intelligence tip management	Confidential reporting and risk review.	☐	
Asset risk scoring	Rank infrastructure by threat, location, past incidents.	☐	

Fire Service

Module/Function	What it should do	Status	Evidence / Gap Notes
Fire incident reporting	Fire outbreak, smoke, explosion.	☐	
Fire dispatch	Fire truck, rescue unit, equipment.	☐	
Hydrant mapping	Hydrant locations, status, accessibility.	☐	
Building fire inspection	Fire certificate and safety compliance.	☐	
Fire investigation	Cause of fire, damage, casualty, evidence.	☐	

NEMA/SEMA Emergency Management

Module/Function	What it should do	Status	Evidence / Gap Notes
Disaster reporting	Flood, building collapse, explosion, displacement.	☐	
Relief distribution	Track supplies, beneficiaries, camps.	☐	
Emergency coordination	Coordinate FRSC, Police, Fire, Civil Defence, hospitals.	☐	
Shelter/camp management	Register displaced persons and support needs.	☐	
Situation reports	Daily response summary and operational status.	☐	

State Traffic Agencies

Module/Function	What it should do	Status	Evidence / Gap Notes
Traffic congestion reporting	Gridlock, blocked road, illegal parking.	☐	
Traffic violation management	One-way driving, obstruction, bus stop violation.	☐	
Towing/impound workflow	Track towed or impounded vehicles.	☐	
Road closure alerts	Construction, protest, event closure.	☐	
Traffic officer patrol logs	Field enforcement and patrol activities.	☐	

Ambulance/Hospital Partners

Module/Function	What it should do	Status	Evidence / Gap Notes
Emergency patient intake	Crash victim/hospital handover.	☐	
Ambulance dispatch	Nearest ambulance allocation.	☐	
Casualty registry	Injury severity and treatment status.	☐	
Referral tracking	Transfer between hospitals.	☐	

Insurance Partners

Module/Function	What it should do	Status	Evidence / Gap Notes
Accident claim verification	Verify FRSC/police crash report.	☐	
Vehicle theft claim verification	Verify police theft report.	☐	
Controlled evidence access	Share case documents with permission.	☐	
Fraud detection support	Repeated claims, suspicious reports, document checks.	☐	

5. Common vs Separate Modules - Product Architecture Summary

Module	Common to All Agencies?	Agency-Specific Customisation
User login and roles	Yes	Roles and permissions differ by agency.
Agency tenant setup	Yes	Branding, hierarchy, jurisdiction, forms.
Incident reporting	Yes	Case types and required fields differ.
Case management	Yes	Workflow, SLA, assignment rules differ.
Evidence upload	Yes	Evidence categories differ.
Notifications	Yes	Templates and channels differ.
Mapping and geolocation	Yes	Jurisdiction layers differ.
Dispatch	Yes	Vehicle/team/resource type differs.
Dashboards	Yes	KPIs differ by agency.
Workflow engine	Yes	Steps, approvals and referrals differ.
Document generation	Yes	Templates differ.
Payment/fines	Yes	Fine/fee types differ.
Mobile officer app	Yes	Field forms and permissions differ.
AI triage	Yes	Rules/models differ by case type.
Road crash investigation	No	FRSC primarily.
Vehicle theft investigation	No	Police primarily.
Roadworthiness inspection	No	VIO/VIS primarily.
Critical infrastructure protection	No	Civil Defence primarily.
Fire dispatch	No	Fire Service primarily.
Disaster relief management	No	NEMA/SEMA primarily.

Recommended Core Data Model

Entity	Purpose / Key Fields
Tenant / Agency	Agency name, type, logo, colour, contact, parent agency, enabled modules.
Jurisdiction	State, zone, command, station, sector, geofence, service coverage.
User / Officer	Name, badge, role, station, supervisor, status, agency, device, auth profile.
Citizen / Reporter	Name, phone, email, identity status, consent, preferred channel.
Case / Incident	Case number, type, status, severity, location, agency, assigned officer, SLA.
Evidence	Files, photos, videos, metadata, GPS, timestamp, uploader, chain of custody.
Duty Session / Patrol Log	Officer, start/end time, route, checkpoints, incidents, notes.
Referral	Source agency, target agency, reason, status, SLA, accepted/rejected by.
Vehicle	Plate number, VIN/chassis, make/model, owner link, stolen/flagged status.
Document / Report	Template, generated PDF, QR code, status, approval, access control.
Payment / Fine	Amount, offence, payer, payment status, provider reference, receipt.

6. MVP Gap Checklist - What to Build Next

Use this section as a direct backlog for the next development cycle. Items are grouped by priority.

Priority	Build Item	Reason	Acceptance Criteria
P0	End-to-end citizen stolen vehicle report	Core MVP public use case.	Citizen submits report, receives reference, Police queue receives case, officer can update status.
P0	End-to-end crash report workflow	Original FRSC use case.	Crash report captures location, vehicles, casualties, evidence, dispatch status, and FRSC report.
P0	Tenant and role-based permission enforcement	Required for multi-agency trust.	FRSC cannot see Police-only records unless referred; admin actions audited.
P0	Officer authentication and profile from backend	Avoid static demo accounts.	Profile fields load from real user; badge and role control available tools.
P0	Case assignment and referral workflow	Central to agency operations.	Supervisor assigns case; officer gets alert; referral creates receiving agency task.
P1	Vehicle lookup service/mock	Needed for stolen vehicles and VIO checks.	Plate lookup returns status, owner-safe summary, document/roadworthiness flags.
P1	Duty session and patrol log	Seen in UI, should become operational.	Start/end duty, GPS timeline, patrol summary, incident links.
P1	Offline mode and sync queue	Important for field operations in poor-network areas.	Create/update case offline, sync later, handle conflicts and failures.
P1	Analytics and hotspot dashboard	Useful for management and selling the platform.	Filters by agency, state, type, date, severity; heatmap and export available.
P1	Document generation with QR verification	Formal reports create value.	Generate crash/theft/inspection report PDF with QR verification page.
P2	Payments/fines	Revenue and compliance extension.	Fine issuance, payment status, receipt, reconciliation dashboard.
P2	AI triage and duplicate detection	Improves scale and speed.	Suggest agency, severity, duplicate cases, and summary with human override.
P2	Partner portals	Insurance, hospitals, towing, emergency partners.	Controlled external access with limited permissions and audit logs.

Suggested MVP Routing Rules

Citizen Report Type	Primary Agency	Secondary Agency / Partner
Road crash with injury	FRSC	Police, hospital, ambulance
Fatal crash	FRSC	Police, hospital
Vehicle theft	Police	VIO / vehicle registry
Stolen plate number	Police	VIO
Vehicle with fake/expired documents	VIO	Police
Road obstruction	FRSC	State traffic agency
Pipeline vandalism	Civil Defence	Police
Fire outbreak	Fire Service	Civil Defence, Police
Flood/disaster	NEMA/SEMA	Civil Defence, Police, FRSC
Dangerous driving	FRSC	Police

7. Security, Compliance and Technical Non-Negotiables

Area	Requirement	Agent Check
Tenant isolation	Each agency sees only its own records unless a referral/share permission exists.	☐
Authentication	Officer login must use secure authentication; PIN should not be sole high-risk authentication for admin actions.	☐
OTP/PIN reset	Rate limiting, lockout, expiry, audit, device/session controls.	☐
Audit logs	All critical events logged: login, view, update, assign, refer, close, export, delete.	☐
Data privacy	Limit visibility of vehicle owner, victim, witness, medical details by role.	☐
Evidence integrity	Capture uploader, timestamp, location, checksum or immutable metadata for evidence chain.	☐
Location tracking	Duty-based, consented, policy-controlled, with clear off-duty behaviour.	☐
Offline storage	Encrypt local data and clear/sync safely after upload.	☐
API security	JWT/session validation, rate limiting, tenant scoping, server-side permissions.	☐
Backups and retention	Define case, evidence, audit, and report retention periods.	☐
Testing	Unit, integration, security, mobile offline, role-permission, and workflow tests.	☐

Recommended Configuration-First Design

Do not hardcode the platform around agency names only. Build it around tenant, agency type, case type, workflow, jurisdiction, role, form template, document template, and permission model. This will allow the same platform to onboard FRSC, NPF, VIO, Civil Defence, Fire Service, state traffic agencies, hospitals, insurers, and towing partners without major rewrites.

Configurable Item	Example
Case type	Road Crash, Vehicle Theft, Roadworthiness Issue, Vandalism, Fire, Disaster.
Owning agency	FRSC, Police, VIO, Civil Defence, Fire Service, NEMA/SEMA.
Required fields	Plate number, location, photos, victim details, witness statement.
Workflow	New -> Assigned -> Investigating -> Referred -> Resolved -> Closed.
SLA	15 minutes for emergency crash; 24 hours for theft acknowledgement.
Document template	FRSC crash report, Police theft report, VIO inspection certificate.
Escalation rule	Fatal crash -> FRSC supervisor + Police command + hospital alert.

8. Agent Sign-off Template

The agent should complete this page after reviewing the MVP and implementing remaining items.

Review Area	Status	Evidence / Notes
Agency selector and tenant routing		
Officer authentication and profiles		
Citizen stolen vehicle reporting		
FRSC crash reporting		
VIO vehicle inspection/lookup		
Case assignment		
Cross-agency referrals		
Duty session and patrol logs		
Offline mode and sync		
Location sharing and map		
Analytics and hotspots		
Document generation		
Security and audit logs		
Testing completed
